

2FA BYPASS

Lab: 2FA simple bypass

In the previous Lab, we found the user's credentials.

But what if the application has implemented 2FA.

Well, this is one of the methods to bypass 2FA.

To understand how to bypass 2FA, we are gonna solve a Portswigger Lab.

=====

This lab's two-factor authentication can be bypassed. You have already obtained a valid username and password, but do not have access to the user's 2FA verification code. To solve the lab, access Carlos's account page.

- Your credentials: wiener:peter
 - Victim's credentials carlos:montoya
- =====

Solution

Step 1: Log in to your account.

Click on My account and enter your credentials (wiener:peter). Log in to your own account. Your 2FA verification code will be sent to you by email.

Home | **My account**

Login

Username

wiener

Password

.....

Log in

Step 2: Click the Email client button.

Click the Email client button to access your emails.

2FA simple bypass

Back to lab home

Email client

Back to lab description >>

Please enter your 4-digit security code

Login

Step 3: Enter the security code.

Your email address is wiener@exploit-0aeb00a00389f0f180e5fc3c01be0007.exploit-server.net

Displaying all emails @exploit-0aeb00a00389f0f180e5fc3c01be0007.exploit-server.net and all subdomains

Sent	To	From	Subject	Body
2026-09-15 07:44:23 +0000	wiener@exploit-0aeb00a00389f0f180e5fc3c01be0007.exploit-server.net	no-reply@0adc0027032bf0fa80d6fd4900ec00b8.web-security-academy.net	Security code	Hello! Your security code is 1445. Please enter this in the app to continue. Thanks, Support team

Copy the security code and enter in the input field.

Please enter your 4-digit security code

1445

Login

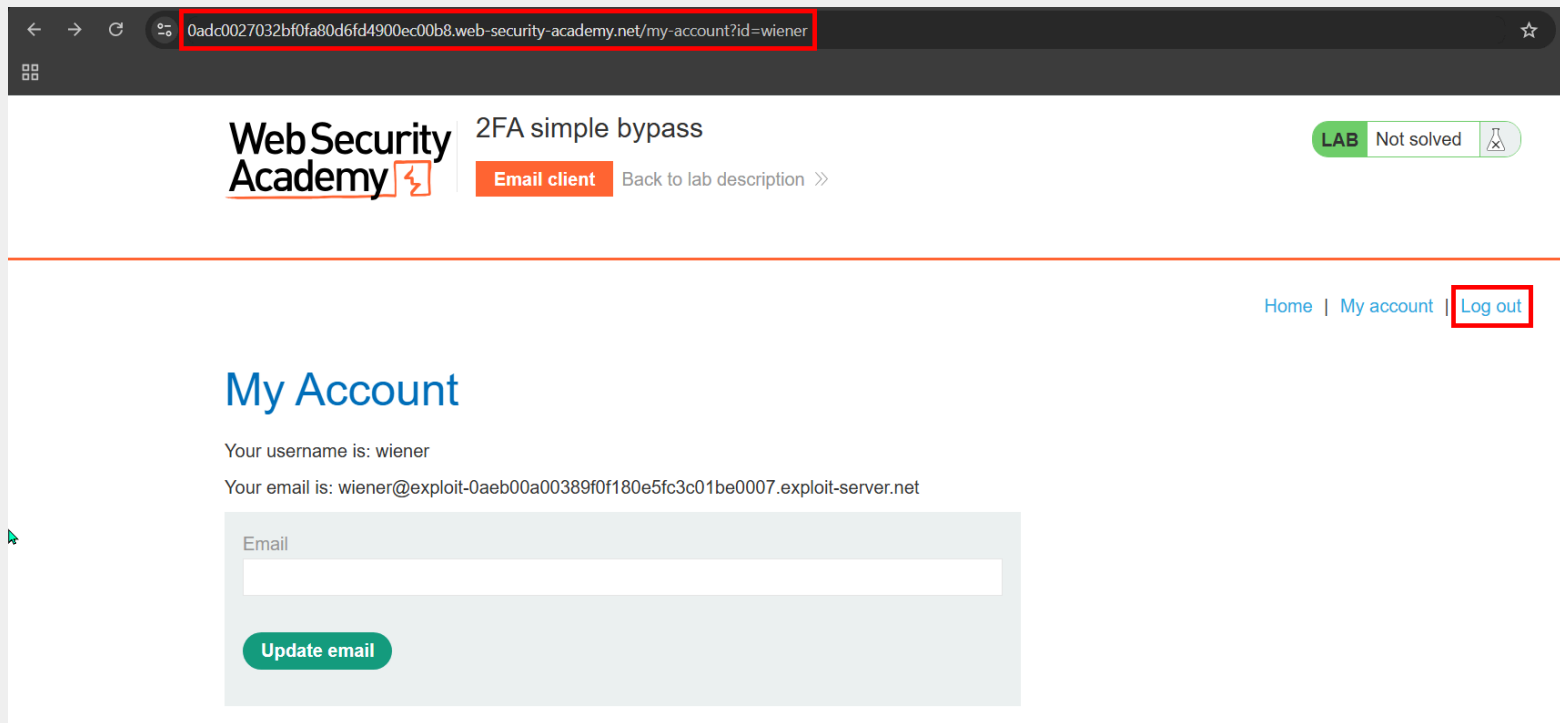

Hit Login.

Step 4: Make a note of the URL & Log out

Go to your account page and make a note of the URL and Log out of your account.

My URL looks like:

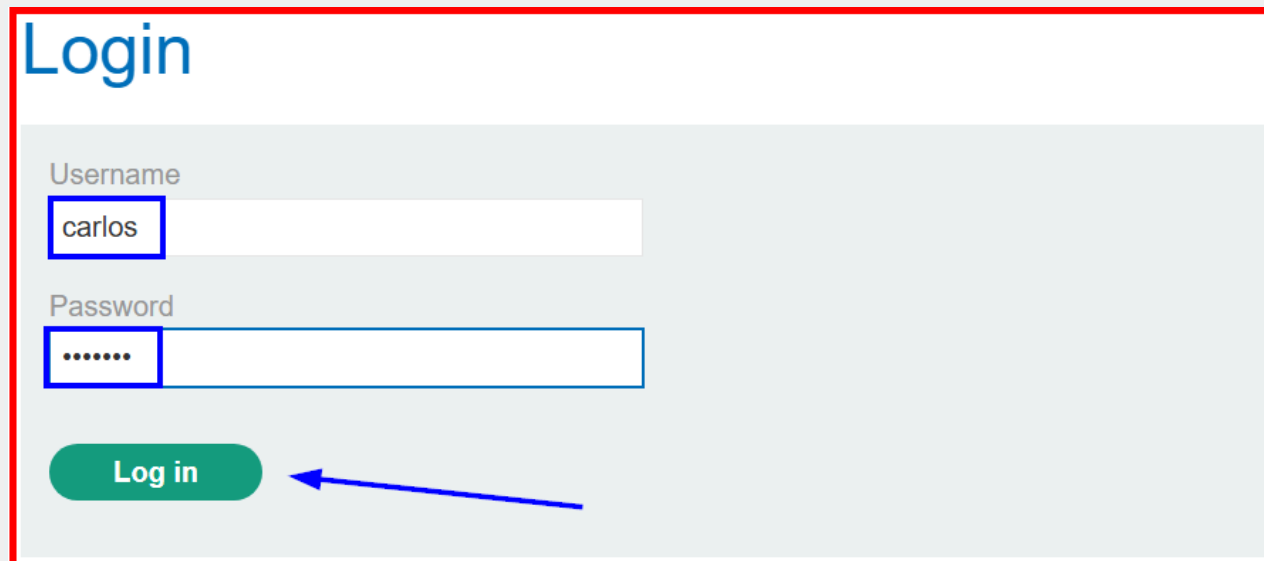

<https://0adc0027032bf0fa80d6fd4900ec00b8.web-security-academy.net/my-account?id=wiener>

We can see that after Log in, we are redirected to </my-account>

Step 5: Log in using the victim's credentials.

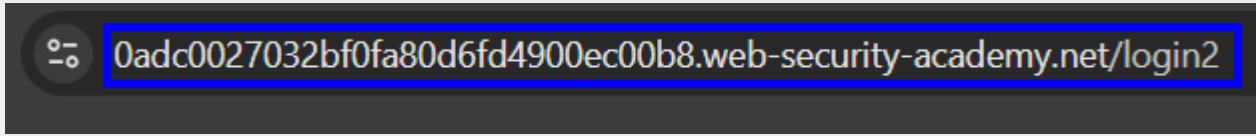

Victim's credentials carlos:montoya

Now in real life, we don't have access to the victim's email and the code is actually sent to the victim's email.

Step 5: Bypass 2FA.

When prompted for the verification code, the URL looks something like:

Just focus on the `/login2`

Manually change the URL to:

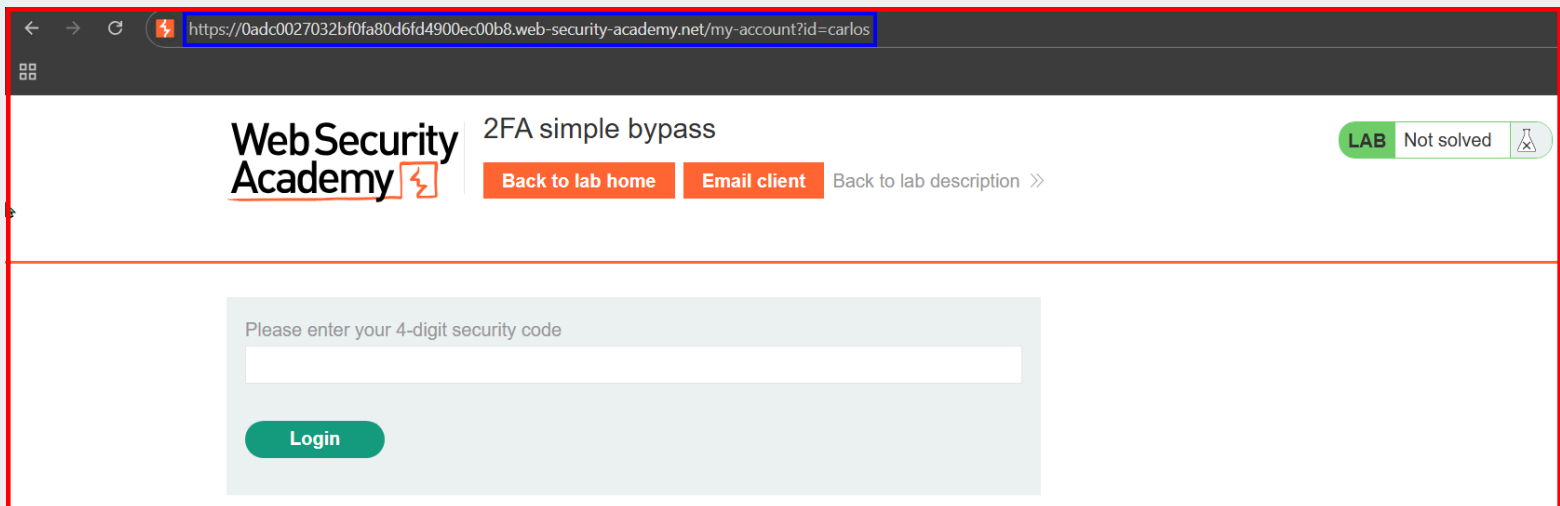

`https://0adc0027032bf0fa80d6fd4900ec00b8.web-security-academy.net/my-account`

or

`https://0adc0027032bf0fa80d6fd4900ec00b8.web-security-academy.net/my-account?id=carlos`

I mean change the `/login2` to `/my-account` or `/my-account?id=carlos`

Because we know from our previous login that after the login, we get redirected to `/my-account` page.

Hit Enter.

Congratulations, you solved the lab!
